

Waterhousea floribunda

Weeping Lilly Pilly

Description

A medium to large evergreen tree native to northern NSW rainforests

Size

Maximum height: 10 - 12 metres

Maximum spread: 5 to 8 metres

Features

- Weeping foliage and dense growth
- Clusters of small perfumed white flowers in summer and flushes of red growth in spring

Uses

- Good dense screen tree
- Tolerates light shade and can tolerate pruning to form a hedge
- Similar to Lilly Pilly but smaller fruit are much less of a problem for footpaths

Preferred conditions

Well drained soil. Part shade or full sun if moisture available. Fast growth if adequately watered

Availability

All nurseries.

Cultivars

'Sweeper' – a new cultivar with a more weeping habit and glossy green leaves.
